EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Ronni S Jillions, Reg. No. 31,979 on 03/21/2012.

The application has been amended as follows:

In the Claims

Claim 1 has been rewritten as follows:

1. (Amended) A method of controlling a windmill, especially in stand alone operation, said windmill comprising a rotor having a substantially horizontal axis of rotation, at least two blades, which are each at one end connected with the rotor and extending from there substantially along a blade axis, about which the blade can be rotated to an adjustment angle for the blade, a blade adjusting device for adjusting a common basic angle of adjustment for the blades, means for detecting the size of the basic angle of adjustment, means for detecting the load on the windmill, means for detecting the deflection of the blade in the direction of the axis of rotation,

the method comprising controlling the rotational speed of the windmill rotor by adjusting the basic angle of adjustment, and providing a control signal for the blade adjusting device in dependency of the load and the wind speed;

Art Unit: 3745

wherein the deflection of the blade in the direction of the axis of rotation is used as a measure for the wind speed.

The above change was made to put the application in allowable condition.

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance:

The instant application is deemed to be directed to a non-obvious improvement over the invention patented in Pat. No. 5,584,655. The improvements are a method of controlling a wind turbine comprising the steps of controlling the rotational speed of the windmill rotor by adjustment of the basic angle of adjustment, and providing a control signal for the blade adjusting device in dependency of the load and the wind speed; wherein the deflection of the blade in the direction of the axis of rotation is used as a measure for the wind speed. The improvements further comprising a windmill having a device for detecting the size of the deflection of a blade in the direction of the axis of rotation of the rotor and means for detecting the size of the basic angle of adjustment and means for transferring a detected size of a blade deflection and a detected size of the basic angle of adjustment to a controlling device.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Prior Art

The prior art made of record but not relied upon is considered pertinent to applicant's disclosure and consists of 3 patents.

Carter (4,522,564), Putnam (2,360,792), and Coleman et al. (4,435,646) are cited to show different windmill with blade cone angle adjustment systems.
